 designopen.in/debuglru/

Less than **50%** of the city's garbage is currently being processed at the solid waste processing centers across the city, with the **rest dumped in landfills.**

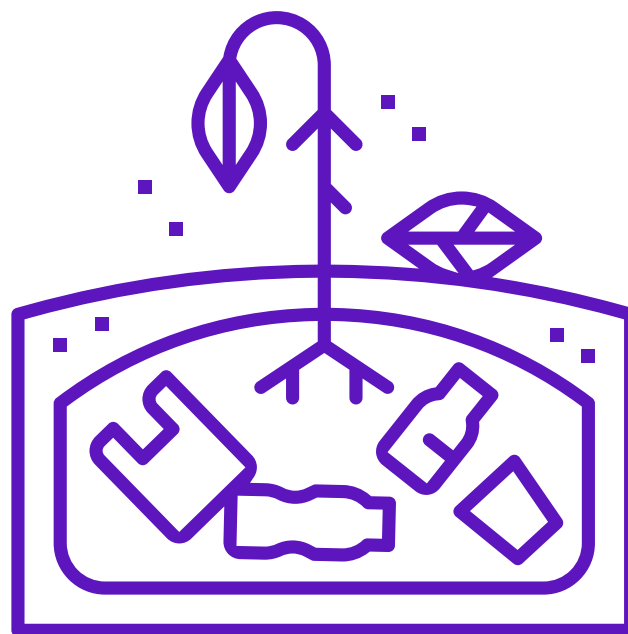

“The Government needs to **treat this as a crisis in creating a war room** like it did for Covid. Citizens are angry and BBMP is getting away without any answers.”

- a retweet by Kiran Mazumdar Shaw, Biocon Limited, on waste mismanagement in Bangalore

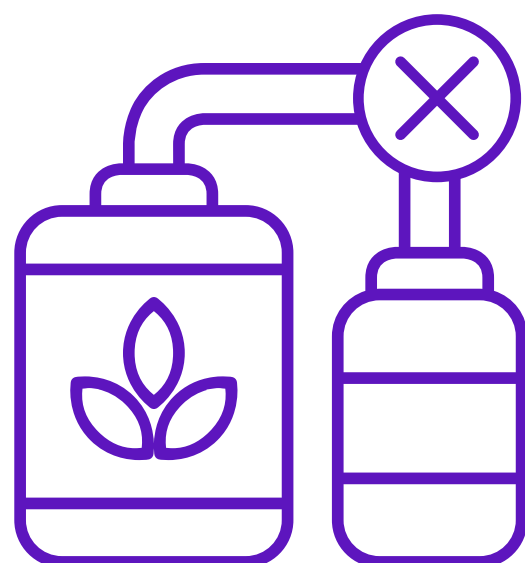

While the BBMP has set a target of **85%** for segregation of waste, **only 42%** has been achieved.

Bangalore has **7 landfills and 6 waste - processing** units which have not been **upgraded since 2015.**

**150 dry waste collection centers in the city can handle only one tonne of waste on average.**

**9 decentralized biogas units  
have not been functioning  
since 2017.**
